

# HandiBlock

The HandiBlock is designed to facilitate installation and minimize errors, allowing correction of errors and consequently minimization of wastage.

With HandiBlock the transit can always be pre-packed. If a cable or pipe is missing during assembly, the block is quickly rebuilt with a HandiPlug to a closed block and the transit can be completed at a later time.

HandiBlock is available in four sizes to fit cables and pipes from Ø 4 to 54 mm (Ø 1.58" to 2.13"). A HandiBlock consists of two compact MainBlocks with grooves on the inside and two inserts consisting of many compressed rings in different sizes. Each ring has clear markings for different cable sizes. It helps the technician to quickly and safely choose the right size of block, insert and ring. HandiBlock's design creates a seal as in compression do not deform the parts of the block. This means that all parts can be reused when repacking.

Every compression ring has a clear marking to indicate different cable/pipe dimensions

Extra fire protection! The part of the InsertStrip that protrudes from the MainBlock, acts as a small but effective heat shield.

Size		HandiBlock complete with Plug		HandiBlock without Plug		Plug		Mainblock		Insert Strip
